SHOCKWAVE THERAPY

SHOCKWAVE THERAPY IS A MODERN AND HIGHLY EFFECTIVE TREATMENT IN PAIN THERAPY

The device generates a mechanical pressure wave, which is transferred to the human body by an applicator head and which radiates out in the tissue. The mechanical energy is absorbed by the tissue and decreases as the distance from the application site increases, and stress triggers reactions in the tissue that have a positive influence on a wide range of orthopedic and neurological conditions, thus get the result of pain relief, including acute pain and chronic pain reduction.

Benefits:-

- Increased Metabolism.
- Improve blood circulation.
- Regeneration of damaged tissue.
- Reduce or relieve pain.
- Inflammation eliminated.
- Non-invasive procedure.
- No need for surgery or medication.
- Treatment sessions last for an average of only 15 minutes.

Conditions to be treated:-

- Plantar fasciitis
- Insertional Achilles tendonopathy /posterior heel spur
- Achilles tendonopathy
- Patellar tendinitis
